All portfolios are designed following a thorough financial planning exercise to establish the financial objectives and risk attitude. Past performance should not be taken as an indication of future performances. Portfolio values can go up as well as down.

## Portfolio objective and investment policy

The **Core Sterling Cautious Growth Portfolio** service is strategically designed for capital preservation, coupled with the potential for capital growth. With a target annualized rate of return ranging between +3% to +5% (though not guaranteed) over a minimum 5-year timeframe, we aim to maintain volatility within historic standard deviation levels. The primary objective is to limit peak to valley losses to a maximum of 8%.

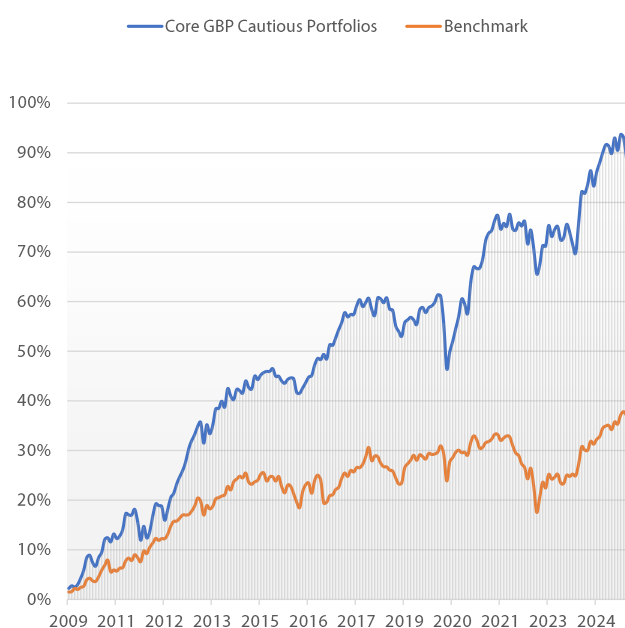

To attain these goals, the portfolio will employ active asset management, allowing for unrestricted asset-class allocation. Investments will predominantly consist of long-only UCITS V compliant collective investment schemes (CISs) from reputable international asset managers. Additionally, the portfolio may include positions in debt securities, equities, and regulated CISs managed internally by Integra's fund managers. Money market instruments, including the utilization of the Integra Treasury Platform service, as outlined in the related Terms of Reference, may also be incorporated. The collaboration between external asset managers and Integra Private Wealth's in-house expertise ensures a dual-control approach in terms of both structural and market risk management. While the portfolio primarily targets Sterling-denominated or Sterling-hedged assets, strategic investments in other currencies may be employed as hedges or speculative positions.

iShares S&P 500 ETF	-0.54%
Threadneedle (Lux) UK Equity Income Fund	-0.21%

## Contribution to performance by asset class

## TECHNICAL TERMS

The 1 month British Pound Sterling **GBP SONIA** 'Sterling Overnight Index Average' **interest rate benchmark** is based on actual transactions and reflects the average of the interest rates that banks pay to borrow sterling overnight from other financial institutions and other institutional investors.

**Drawdown** is a risk measure used to evaluate how long it typically takes an investment to recover from a temporary decline in its net asset value.

The **Sortino ratio** measures the risk-adjusted return of the investment portfolio. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.
